WAVE RACK (Galvanized) 509-2028, 2029, 2030, 2031, 2032, 2033

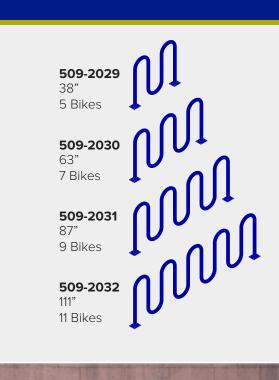

Simple Security

The graceful design and high security of the WAVE RACK has made this type of bike rack a standard for many schools and communities. The WAVE RACK can be used as a single-sided or double-sided parking bike rack. This rack uses thick pipe construction and allows for one of the wheels and frame to be secured using a u-style bike lock.

Just your size.

The WAVE RACK is available in 4 lengths to meet your bike parking capacity needs.

Installation Instructions — Surface Mount

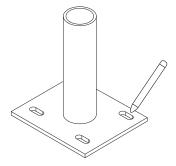

TOOLS NEEDED

Tape Measure
Marker or Pencil
Masonry Drill Bit
Drill (Hammer drill recommended)
Hammer
Wrench or ratchet 9/16"
Level

RECOMMENDED BASE MATERIAL

Solid concrete is the best base material for installation. To ensure the proper anchors are shipped with your rack, ask your Park and Facilities representative which anchor is appropriate for your application. Be sure nothing is underneath the base material that could be damaged by drilling.

1

Place the rack in the desired location. Use a marker or pencil to outline the holes of the flange onto the base material.

2

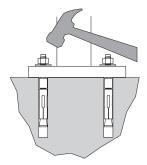

Drill 3/8" diameter holes 3" deep into surface. Make sure the holes are at least 3" away from any cracks in the base material.

3

Place rack (and washers to level rack if necessary) over holes.

4

Thread nuts onto anchors, leaving approximately 1/4" of the anchor protruding, and tap into surface. Tighten nuts down to secure rack.

Installation Instructions — In Ground Mount

TOOLS NEEDED

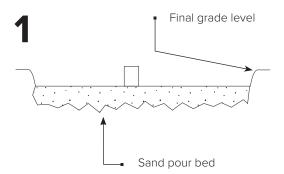

Level
Cement mixing tub
Shovel
Trowel

Hole coring machine with 4" bit Access to water hose Materials to build brace (see "Install Tip" at bottom of page)

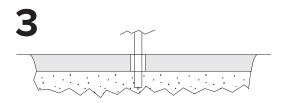

INSTALLING INTO EXISTING SIDEWALK

Core holes no less than 3" diameter (4" recommended) and 10" deep into sidewalk. Fill holes with Por-Rok or epoxy grout. Place rack into holes, making sure the rack is level. 33"-36" of the rack should remain above the surface. If the rack is less than 33" high, it will not support the bike adequately. Make sure the rack is level and held in place until the grout has set.

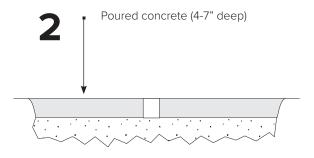

INSTALLING INTO A NEW SIDEWALK

Place corrosion resistant sleeve (min. 3" inside diameter) in sand pour bed in exact location where rack will be installed. Make sure top of sleeve is at same level as desired finished concrete surface. Fill sleeve with sand to keep it in place and prevent it from filling with concrete.

After appropriate cure time, dig out sand from sleeves and insert racks, making sure they are level and at the appropriate height. Pour in Por-Rok or epoxy grout and allow to set.

Pour concrete and allow to cure.

An easy way to brace the rack while the grout sets is to bolt two 1x4" boards together at one end and clamp them onto the rack like a clothes pin.
